MSc Bioinformatics & Computational Biology
Regulations four-weeks research project

The project has a duration of four weeks at a workload of 100%. If a student can only work part-time on the project, the duration can be adjusted accordingly.

Admitted supervisors or co-supervisors are proposed by the study administration. They have to be affiliated to the University of Bern or Fribourg and provide appropriate bioinformatics expertise. If a student wants to propose a supervisor, the student has to send a request to the study administration.

The student, in agreement with the supervisor, is free to fix the start date of the project.

As conclusion of the project, the student has to give a talk of about 20 minutes within the corresponding research group and write a report of 5 to 15 pages (excluding figures).

The project counts 7.5 ECTS and is graded by the supervisor on the corresponding form. The final grade is composed of the practical work, presentation and report, each part counting one third.
