5015 | Prof. Dr. G. Fischer, Prof. Dr. A. Thoma, Prof. Dr. H. H. Mauenschlaen | **Nachhaltige** | **Nachhaltige** |

**Referenzen der Arbeiten**

10206 Prof. Dr. Christian Schlöder Perspektive aus der Technik: Eine wichtige Rolle spielt dabei die Technologie, die die Grundlage für die Entwicklung und Realisierung von Innovationen und Neuerungen bildet. Die Technik ermöglicht es, Probleme zu lösen und neue Lösungen zu finden. Sie ist ein wesentlicher Faktor für die Wirtschaftsentwicklung und hat einen großen Einfluss auf die Lebensqualität der Bevölkerung. Aus diesem Grund ist es von größter Wichtigkeit, die Technik zu fördern und zu unterstützen, um eine nachhaltige Entwicklung und eine wettbewerbsfähige Wirtschaft sicherzustellen.

13330 Prof. Dr. Stefan Thunig
Sustainable Regional Development

An example of the main ideas in the development of theory, research approaches and methodologies of sustainability research will be taken as the case study for analysing various forms of learning with socio-ecological systems of practice. Drawing from organisational science (mainly ecological economics), social science, technology and information studies, multi-actor and multi-level approaches, action research and action learning approaches, partic. attention will be given to the analysis of power and power relations in different forms of data generation and their integration at local, regional, national and international levels.

13330 Prof. Dr. Stefan Thunig
Sustainable Development

"Sustainable development" topics are treated in detailed and comprehensive examples of innovative approaches and methodologies: theories and practices of sustainable development and global change, as well as their operational and methodological implications.

13330 Prof. Dr. Stefan Thunig
Sustainable Development

The aim of the presented methods and theoretical concepts is to improve the understanding of the mechanisms of sustainable development and to foster the development of new forms of sustainable development. The case study will illustrate how such an understanding can be achieved by integrating the results of various research approaches.

10172 Prof. Dr. Andreas Reh
Prof. Dr. Karl-Heinz Wenzel
Prof. Dr. Christian Reif
Cultural Heritage Geography

The goal of the course is to develop research projects for sustainable development in the framework of integrative geography. The most important principles and stages of developing sustainable landscape and ecological research will be identified and applied in the practical work of the study project. The central focus of the problem statement of ecological and cultural landscapes is the role of nature and cultural landscapes in sustainable development. The course is divided into three parts: theoretical, practical and methodological. The theoretical part focuses on the role of nature and cultural landscapes in sustainable development. The practical part focuses on the role of nature and cultural landscapes in sustainable development. The methodological part focuses on the role of nature and cultural landscapes in sustainable development.

13382 Prof. Dr. Stefan Thunig
Sustainable Development

The course "Sustainable Development" focuses on sustainable development and its relationship to the environment. The course will cover the following topics: sustainable development, sustainability and the environment, and sustainable development and the environment. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development.

13382 Prof. Dr. Stefan Thunig
Sustainable Development

The course "Sustainable Development" focuses on sustainable development and its relationship to the environment. The course will cover the following topics: sustainable development, sustainability and the environment, and sustainable development and the environment. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development.

13382 Prof. Dr. Stefan Thunig
Sustainable Development

The course "Sustainable Development" focuses on sustainable development and its relationship to the environment. The course will cover the following topics: sustainable development, sustainability and the environment, and sustainable development and the environment. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development.

13382 Prof. Dr. Stefan Thunig
Sustainable Development

The course "Sustainable Development" focuses on sustainable development and its relationship to the environment. The course will cover the following topics: sustainable development, sustainability and the environment, and sustainable development and the environment. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development.

13382 Prof. Dr. Stefan Thunig
Sustainable Development

The course "Sustainable Development" focuses on sustainable development and its relationship to the environment. The course will cover the following topics: sustainable development, sustainability and the environment, and sustainable development and the environment. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development.

13382 Prof. Dr. Stefan Thunig
Sustainable Development

The course "Sustainable Development" focuses on sustainable development and its relationship to the environment. The course will cover the following topics: sustainable development, sustainability and the environment, and sustainable development and the environment. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development. The course will also cover the role of the environment in the development of sustainable development.
